PROFESSIONAL SUMMARY

Computer Science graduate experienced in full-stack development, REST APIs, computer vision, and automation using Python, TypeScript, React, and SQL. Developed software solutions for inventory management, retail optimization, and workflow automation. Current H-E-B Partner with firsthand knowledge of retail operations and business challenges.

EDUCATION

University of Houston-Downtown **Houston, TX**
Bachelor of Science in Computer Science *June 2026*
Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Network Architecture, Software Engineering, Database Systems, Cryptography
Languages: English (Fluent), Spanish (Fluent)

Association for Computing Machinery (ACM), UHD Chapter: Member

- Participated in technical workshops and chapter activities covering Python, web development, coding interview preparation, hackathons/datathons, cybersecurity, robotics, and student project showcases.

TECHNICAL SKILLS

Programming: Python, Java, Go, C++, JavaScript, TypeScript, SQL, HTML/CSS
Frameworks & APIs: FastAPI, React, Node.js, Express.js, Flask, REST APIs, Chrome Extension APIs
Data & Tools: PostgreSQL, SQLite, MySQL, MongoDB, NumPy, Pandas, scikit-learn, Git, Docker, Linux, VS Code, Jupyter
Core Knowledge: Object-Oriented Programming, Data Structures & Algorithms, System Design, SDLC, Databases, Operating Systems, Computer Networking, Software Engineering

SOFTWARE PROJECTS

Shopping Optimizer | *Python, TensorFlow, OpenCV, FastAPI, React, TypeScript, SQLite, Docker, REST APIs*

- Developed a full-stack grocery shopping application integrating computer vision to identify products through a camera and automatically add or remove recognized items from a virtual shopping cart.
- Implemented real-time cart management, tracking item quantities and calculating total prices as products are detected.
- Built FastAPI REST endpoints and a shopping optimization engine to compare grocery prices across multiple H-E-B locations and recommend cost-effective shopping routes based on price, distance, and travel time.

Price Monitoring & Alert System | *JavaScript, Node.js, Express.js, REST APIs, Chrome Extension APIs*

- Developed a Chrome extension that monitors product prices, compares them against user-defined thresholds, and triggers alerts through a Node.js/Express backend

Naruto Blazing Rebirth | *Software Developer* *Sep 2026- Present*

- Contribute to an independently developed online multiplayer game with 5,000+ active players, implementing new features, resolving bugs, and developing backend functionality.
- Collaborate with developers to maintain production systems, troubleshoot gameplay issues, and deliver biweekly content updates.

EXPERIENCE

Mi Tienda - H-E-B Store #648 **Houston, TX**
Receiving Specialist *Apr 2024 - Present*

- Process and validate more than $300,000 in weekly incoming inventory by reconciling load maps, invoices, quantities, and physical merchandise received.
- Troubleshoot computer, printer, handheld-device, and receiving-system issues that interrupt operations, restoring equipment and maintaining workflow continuity.
- Coordinate with vendors, delivery drivers, store leadership, and internal departments to investigate and resolve operational and billing discrepancies under time-sensitive conditions.

D&A Brothers Produce
Technology Intern *Summer 2025*

- Developed a full-stack inventory and order management system using React, TypeScript, REST APIs, and PostgreSQL, consolidating over 100 products, customer-order, and inventory records into a single operational system.
- Built receiving and logistics workflows for incoming shipments, product lots, storage locations, and delivery statuses, improving visibility from warehouse receiving through order fulfillment.

Modern Chemical **Houston, TX**
Operations & Logistics Coordinator *Apr 2020 - Nov 2023*

- Built an internal automation tool to generate Bills of Lading, Packing Lists, and Safety Data Sheet documentation, reducing repetitive administrative work and improving workflow efficiency.
- Built an inventory-tracking tool to maintain material counts, monitor stock availability, and support planning for upcoming customer orders.
- Diagnosed equipment and system failures by inspecting components, testing behavior, isolating faults, and correcting root causes to restore operations.
